ABOUT ME

Final-year Computer Science Engineering student with hands-on experience building full-stack web applications and a growing focus on data driven applications with applied machine learning. Currently building CarIntel, a used car evaluation system that goes beyond price prediction to give condition-based suggestions and a summary of the car. Comfortable working with Python, SQL, and Flask, and quick to pick up new tools and libraries as a project needs them.

EDUCATIONAL QUALIFICATIONS

- **Bachelor of Engineering (B.E) — Computer Science Engineering**
Nawab Shah Alam Khan College of Engineering and Technology, Malakpet, Hyderabad
Current CGPA: 8.06 / 10 | expected graduation: 2027
- **12th (Intermediate) - GPA: 8.0 / 10**
From Narayana Junior College, Narayanguda campus, Hyderabad | **year of passing: 2023**
- **10th (SSC) - GPA: 9.8 / 10**
From All Saints High School, Gunfoundry Abids, Hyderabad | **year of passing: 2021**

TECHNICAL SKILLS

- **Programming Languages:** Python, Vanilla JavaScript, HTML5, CSS3, C++, R language.
- **Frameworks & Libraries:** Flask (Python), Pandas, NumPy, Matplotlib, ggplot2 (R).
- **Databases:** MySQL, Oracle database; Database Design, SQL Querying, Joins, Subqueries, Aggregate Functions, CRUD Operations.
- **Tools & Platforms:** Eclipse IDE, Visual Studio Code, MySQL Workbench, Android Studio.
- **AI & ML:** Exploratory Data Analysis, data cleaning, AI fundamentals, prompt engineering, working knowledge of LLMs.
- **Operating Systems:** macOS (proficient), Windows.

CERTIFICATIONS AND TRAININGS

- Machine Learning with Python — Agratas Institute (Paid Course)
- Additional online courses in AI/ML and related technologies from IBM, HP, and more.

PROJECTS

CarIntel — Used Car Evaluation System (In Progress)

Technologies: Python (NumPy, Matplotlib), Flask, MySQL

- Building a used car evaluation system that takes in brand, model, mileage, year and other details and returns an estimated value along with a brief summary and condition-based suggestions, not just a price number.
- Sourced a dataset of 15,000+ used car listings from Kaggle; currently working through exploratory data analysis and data cleaning ahead of model selection.
- Grounded the approach in a literature review of multiple IEEE papers on ML-based used car price prediction to guide feature selection and modeling direction.
- Designing the system with a Flask web frame and MySQL backend to store car records and evaluation results.

Bookstore Website - PageNest (Mini project)

Technologies: HTML, CSS, Vanilla JavaScript, Python, Flask

- Designed and developed a fully functional bookstore web application from scratch individually as a college project.
- Built an interactive front-end using HTML, CSS, and JavaScript with a Python Flask back-end for dynamic content.
- Implemented features including book listings, selling a book, initiating payments, and a clean user interface.

PERSONAL STRENGTHS

- Proactive and driven - able to independently build complete projects from scratch.
- Highly focused work ethic - once I start something, I stay with it until it's done, often putting in extended, uninterrupted effort to get there.
- Skilled at researching, troubleshooting, and solving problems using modern AI technologies and digital resources.
- Quick to learn new technologies and adapt to new challenges.
- Comfortable working with people from various backgrounds and perspectives.
